Product Description

Scag Jackal Stand-On Mini Skid Steer - SJ1125-N-34-25KSD

Making new tracks. Breaking new ground. Making a stand for more diverse profitability. However you say it, the new Scag® Jackal™ stand-on mini skid steer is doing it. Hit the ground running with this bold workhorse, and dig into untapped productivity and profit-making potential.

Featuring a 1,125-lb. lift capacity with a 3,142-lb. tip capacity, the Jackal has a 83" hinge pin height that delivers a high lift and dump point to help you reach into large dumpsters, containers and truck beds. And with auxiliary hydraulic flow up to 15 GPM and 3000 psi, it has the power and efficiency for whatever challenges await you.

Comes equipped with a 34"- or 40"-wide bucket as standard equipment to make sure you're ready to take on whatever tasks come your way. And our bucket shells are made from Grade 100, military-grade steel for unmatched strength and toughness.

With 7" or 9" available track widths that both feature low ground pressure, this machine delivers surefooted traction for any task in any type of environment you're working in. And easy-change capability between narrow and wide tracks means you can get the optimal footprint you need if—and when—the situation changes.
